

Innovation in Action Series

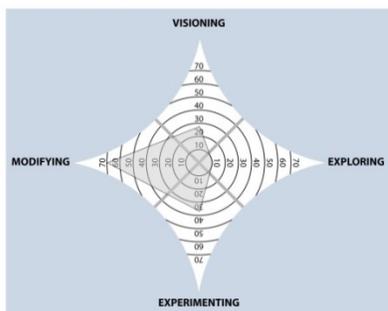

Innovation has become necessary to gain or maintain a leadership position in today's marketplace. It enables improvements and breakthroughs that delight customers and incorporate new products and services. Yet most organizations lack the tools, processes, and alignment that enables innovation.

The Innovation in Action Series (IAS) is a series of modules that explores the dimensions of innovation—Innovation Styles, Innovation Tools and Practices, The Creative Journey®, Taking Initiative, and Strategic Innovation Management—to help organizations improve how they advance their market position.

The Innovation Styles model, part of a half-day module, shows that everyone innovates, but differently, and that there is tremendous synergy available from recognizing and using different styles.

As a modular program, IAS offers quick, useful, innovation-boosting techniques in half-day modules, and also offers in-depth full-day programs that address challenging cultural and process issues.

Innovation Styles

Program Outcomes

IAS can increase your organization's ability to innovate. It can be introduced at the level of individual intact teams or at the department or business unit level. The proven, effective approaches, when implemented as

part of an overall human performance improvement solution, will work to enhance the ability to innovate and bring innovative ideas fully to market.

Learning Approach

IAS is a series of instructor-led modules that can be configured to meet different organizational needs. A minimum configuration might include only The Case for Innovation and Innovation Styles, for a total of one half-day. A maximum configuration, to address needs at individual, process, and cultural levels, may be a four-day program with some research, consulting, and coaching added to optimize the impact.

By using the option of implementing as a series of discrete modules, an organization can:

- Target teams and work units to receive only what they most need
- Focus on strategies of culture change at all the right levels
- Implement gradually to watch for effect, or implement with pilot groups to compare results

IAS has six configurable learning modules, as shown on the following page.

Enabling Improved Performance

IAS provides a variety of tools to promote successful innovation that is easily implemented. These tools are meant to be used continually on the job to remind and reinforce. When these tools and ideas are shared among participants in (optional) follow-up sessions, their use improves over time.

Modules: Key Learnings Are . . .

Your Participants Will Be Able To . . .

The Case for Innovation

How to recognize the business issues that require an innovative approach; how to recognize breakthrough versus incremental change; how the whole innovation process fits business priorities

See the value and priority of innovation

Innovation Styles

How everyone is creative but in different ways; how using all four innovation styles generates more and better ideas; how each style is useful, and how to increase the output of ideas from each style

Apply innovation styles to generate a much wider range of options

Innovation Tools and Practices

How to apply key tools that fit with different innovation styles; how to use Wish Listing, Force-Field Analysis, Matrix Analysis, and Symbol analogy, and how to bring these style-focused tools together to increase their effect

Use the right innovation tool for the job to get the best results possible

The Creative Journey®

How to apply a structured, stepwise process that methodically generates innovations—and follow through to implementation; how to measure, celebrate, and learn as vital steps of the systematic process

Apply a systematic process to take innovations from problem definition through successful implementation

Taking Initiative

How to recognize barriers to initiative in groups; how to adapt to include all innovative styles to gain participation and the widest set of options; how to persuasively present ideas across different styles

Set and maintain momentum for innovation

Strategic Innovation Management: SIMAP

How to deal with strategic innovation; how organizational culture can foster or inhibit innovation; how to deal with “innovation destroyers”; how to plan and prioritize actions to apply the Creative Journey to address a strategic issue

Advance a strategic innovation systematically, identifying and influencing the cultural factors that could derail the effort

Continued

Involving management early is an important success factor, and training managers to support and coach to these processes can maintain and improve performance over time.

Measurement

The SIMAP instrument, from the Strategic Innovation Management module, captures information about the organizational climate and potential barriers to innovation. Some companies choose to repeat the SIMAP instrument 6–12 months after the *Innovation in Action Series* (IAS) to survey changes to the organizational climate that helps or impedes innovation.

Evaluation

Wilson Learning can partner with you to measure initial behavioral changes and business results. One approach to evaluate IAS is to baseline creative ideas, number and quality of innovations, successful implementations, or other measures in a quasi-experimental design with a pilot group. More involved and thorough research options are also available.

This offering, like all others from Wilson Learning, can be customized to reflect your environment and business priorities and can be integrated with your processes.
